

Vismo Home Worker App

The Vismo Home Worker App is fit for purpose for those working within a home environment. Organisations need to ensure the risks of working at home are managed and reduced, to keep employees safe. The App has many features to improve employee wellbeing and peace of mind, such as Incident Management, Mass Notification and the Privacy Mode. The App is fully customisable for organisations to add their own branding, colours, web links and phone numbers. Please note, Home Worker is also referred to as Remote Worker.

Features Include:

The Incident Management feature provides managers with the ability to immediately identify if any employees are within the vicinity of an incident.

In the event of an incident, managers can instantly view who is potentially at risk and send a Mass Notification from the Vismo Secure Portal. Notifications are delivered via an In-App message and employees can be provided with critical information and respond with their safety status.

To protect privacy without compromising safety, the Privacy Mode feature enables individuals to choose when their device is located, to safeguard privacy whilst using the Vismo App.

* These features requires a minimum Licence quantity of 250.

** Local: County or State.

Benefits of The Home Worker App

Peace of Mind for Employees

Employees gain peace of mind knowing if an emergency situation happens, the Red Alert feature is available to immediately raise an alert and inform managers. The Incident Management and Mass Notification feature ensures employees can be provided with essential information when required.

Effectively Manage Risks

Points of Interest Layers can be incorporated into the Vismo Secure Portal, enabling organisations to view locations and risks in relation to employees. This can include risks such as COVID-19 case rate data and incident impact areas, providing organisations with the tools to better manage an incident.

Provide Immediate Support in an Alert Situation

If an incident occurs, the Mass Notification enables managers to instantly inform employees with critical information and instruction if necessary. By implementing measures early, organisations can be proactive in their management of incidents.
