

Vismo Vehicle Tracker (4G)

The Vismo Vehicle Tracker (4G) can be deployed globally, where there is cellular coverage. The device is designed to be easily installed within a matter of seconds into the OBD-II Port. The Vehicle Tracker uses 4G technology to automatically send regular location updates to the Vismo Secure Portal, where location history and trails can also be viewed. For ease of use, the Vehicle Tracker can be easily moved between vehicles if required.

Features Include:

Virtual Geo-Fences can be added to the map within the Vismo Secure Portal to denote high-risk areas or places of safety to report or alert the necessary teams when vehicles enter or exit these areas.

Using 4G technology, the Vehicle Tracker automatically reports accurate location information back to the Vismo Secure Portal once plugged in, ensuring vehicles can be immediately located. If 4G is unavailable, the device can fall back on 2G.

Within the Vismo Secure Portal, organisations can view all of the vehicle locations on the map, along with location history information, which can be exported and history trails.

Technical Specification & Features

Technology	LTE(CAT1)/ 3G / 2G /GNSS/BLUE-TOOTH
Connection	OBD II Port
Battery	Built in internal battery - 170 mAh Li-Ion battery 3.7 V (0.63 Wh)
Dimensions	67.2 x 49.6 x 25 mm (L x W x H)
Power Supply	10 - 30 V DC with overvoltage protection
Features	Accelerometer, commands and configuration via SMS

Benefits of the Vismo Vehicle Tracker (4G)

Manage Risks and Liability

Organisations can manage their risks by having the ability to locate vehicles at all times. Individual Geo-Fence's can be set up in relevant destinations and when a vehicle enters a pre-defined high-risk area for example, the necessary teams will be immediately alerted, enabling organisations to instantly take action.

Easily Installed

No mechanical experience is required for the installation of the devices, they simply plug into the OBD-II Port in the vehicle. Ensuring organisations do not incur extra costs for installation. Once the devices are plugged in, they will automatically report to the Vismo Secure Portal.

Manage Incidents Effectively

Manage incidents effectively through instantly locating vehicles in the vicinity of the incident area. Bolt-On options for the inclusion of a 24/7 Alarm Receiving Centre are also available if you'd prefer to outsource incident management.
