

Garmin InReach Mini 2

The Garmin InReach Mini 2 is a great solution for those working in a remote environment with no mobile coverage and requiring a small handheld device. The Garmin InReach Mini 2 provides employees with many features such as the Panic Alert, Geo-Fencing capabilities and two-way communication. This small yet rugged device ensures employees can be located in a remote area along with a Panic Button for emergencies.

Features Include:

The Garmin InReach Mini 2 ensures employees are always located and protected in the most remote areas. This device works using the Iridium Satellite Network, a great solution if there is no cellular coverage at the location.

The Panic Button is located on the side of the device. The Panic Alert feature can be triggered in the event of an emergency. Managers will be instantly informed of the activation and will receive an updated location from the device.

Virtual Geo-Fences can be added to the map within the Vismo Secure Portal to denote high-risk areas or places of safety to report or alert the necessary teams when employees enter or exit these areas.

| Battery | Rechargeable internal lithium ion, up to 14 days at 10-minute tracking as default. |
| Features | Interactive SOS, send and receive text messages to SMS and email, Bluetooth connectivity, charging via USB-C on the side of device. |

Benefits of the Garmin InReach Mini 2

Locate Employees in Remote Areas

Organisations can manage and reduce risks through ensuring employees can be located in the most remote areas. The two-way communication using SMS and Email can be used to check on employee wellbeing and safety.

Manage Incidents Effectively

Manage incidents effectively through instantly locating workers in the vicinity of the incident area and communicate effectively through the two-way communication. Bolt-On options for the inclusion of a 24/7 Alarm Receiving Centre are also available if you'd prefer to outsource incident management.

Peace of Mind

Employees gain peace of mind when working in remote conditions, often high-risk and inhospitable places where there is no GSM coverage. If the user is in a high-risk area, this device is ideal due to the small and discreet nature.
