

The Vismo Monitor App

The Vismo Monitor App help organisations better manage any alerts triggered by employees. Administrators of Vismo have access to the Monitor App, which enables them to receive alerts directly to their mobile device. When an alert is activated, administrators of the account receive an In-App message with the individuals last known location, phone number, email address and an audio recording from when the alert was activated.

Features and Benefits Include:

Employers are better prepared for when an alert is raised by an employee. Organisations have all of the necessary information to provide immediate support.

Employees gain peace of mind, knowing alerts will be sent to managers through a highly secure solution.

An In-App notification can be delivered immediately and does not suffer from the potential latency issues that sending an SMS can face.
